

La balaustra è formata da due lastre di spessore 10 mm, larghezza massima di 1200 mm, in vetro extra-chiaro stratificato con pellicola PVB di sicurezza interposta. Le lastre sono alloggiare all'interno di un profilo estruso di alluminio anodizzato e strette da una piattina che funge da blocco di resistenza alla spinta. La luce LED è integrata all'interno del profilo. Quest'ultimo permette la dissipazione del calore naturalmente, senza aggiunta di ulteriori elementi.

The balustrade is made up of two sheets of thickness 10 mm, maximum width of 1200 mm, in extra-clear laminated glass with PVB film interposed security. The plates are housed within an anodized extruded aluminum profile, narrow strip that acts as a resistance to the thrust block. The LED light is integrated within the profile. This allows heat dissipation naturally, without adding additional elements.

BALAUSTRRA "LUMINOSA"

la nuova balaustra design Iosa Ghini per Faraone

Balaustra "Luminosa"

Massimo Iosa Ghini designs for Faraone the Balaustra "Luminosa", a perfect marriage between functionality and aesthetics, where the lightness and the technical elements create an innovative and versatile product.

The aluminum elements integrate harmoniously with the architectural structure, and the Balaustra "Luminosa" becomes a design element that draws the spaces with light. The main feature of the project is the LED light that can be tailored to customer needs, from icy and cold light to warm and welcoming colors.

The Balaustra is also available without light.
